

## PKMS LaTeX Paper Fixture

An efficient parser reads the whole file in a single pass and keeps its working set small. The word efficient also carries the ffi ligature, which stresses text extraction on purpose.

The metric is binary—each document either passes or fails, and the em dash in this sentence is typeset as a real em dash character.

Real papers use footnotes, sections, and math to stress the extractor, so this fixture keeps at least one of each nearby:  $e^{i\pi} + 1 = 0$ .
